

Python Tasks – Day7

1. What does the code for an empty dictionary look like? `list={}`
2. What does a dictionary value with a key 'foo' and a value 42 look like?
3. What is the main difference between a dictionary and a list?
4. What happens if you try to access `spam['foo']` if `spam` is `{'bar': 100}`?
5. If a dictionary is stored in `spam`, what is the difference between the expressions 'cat' in `spam` and 'cat' in `spam.keys()`?
6. 6. If a dictionary is stored in `spam`, what is the difference between the expressions 'cat' in `spam` and 'cat' in `spam.values()`?
7. What is a shortcut for the following code?
 `if 'color' not in spam:`
 `spam['color'] = 'black'`
8. What are escape characters?
9. What do the `\n` and `\t` escape characters represent?
10. How can you put a `\` backslash character in a string?
11. The string value "Howl's Moving Castle" is a valid string. Why isn't it a problem that the single quote character in the word Howl's isn't escaped?
12. If you don't want to put `\n` in your string, how can you write a string with newlines in it?
13. What do the following expressions evaluate to?
 - a) `'Hello world!'[1]`
 - b) `'Hello world!'[0:5]`
 - c) `'Hello world!':[:5]`
 - d) `'Hello world!':[3:]`
14. What do the following expressions evaluate to?
 - a) `'Hello'.upper()`
 - b) `'Hello'.upper().isupper()`
 - c) `'Hello'.upper().lower()`
16. What do the following expressions evaluate to?
 - a) `'Remember, remember, the fifth of November.'.split()`

b) `'-'.join('There can be only one.'.split())`

17. What string methods can you use to right-justify, left-justify, and center a string?

18. How can you trim whitespace characters from the beginning or end of a string?
